

Master in Artificial Intelligence

Problem Definition II

Purpose

The purpose of the section is to help you learn how to define problems to become a Successful Artificial Intelligence (AI) Engineer

At the end of this lecture, you will learn the following

- **How to understand stakeholders' needs and define problems that can be addressed using artificial intelligence and machine learning techniques**

Brainstorm Solutions

Brainstorm Solutions

Prioritize Problems

Problem/ Opportunity	#1	#2	#3
Impact	Low	High	High
Feasibility	High	High	Low
Alignment with Organizational Goals	Low	High	High
Overall Priority	Low	High	Medium

Define Success Metrics

Prototype and Validate

Proof of concept vs. prototype

Proof of concept (POC)

Theoretical demonstration of a product/process/concept.

Determine whether an idea can be turned into a reality.

Test whether the idea is viable and explore the idea's potential to be developed or built.

Verify that the idea will function as envisioned.

Identify potential technical and logistical issues that might interfere with success.

Address how the proposed product or service will support organizational goals, objectives or other business requirements as a secondary goal.

Not intended to explore market demand for the idea, nor is it intended to determine the best production process.

Prototype

Very early draft of a product/process/concept.

Meant to turn a POC idea into a slimmed-down version of the end product that can be tested and evaluated for usability, functionality and design.

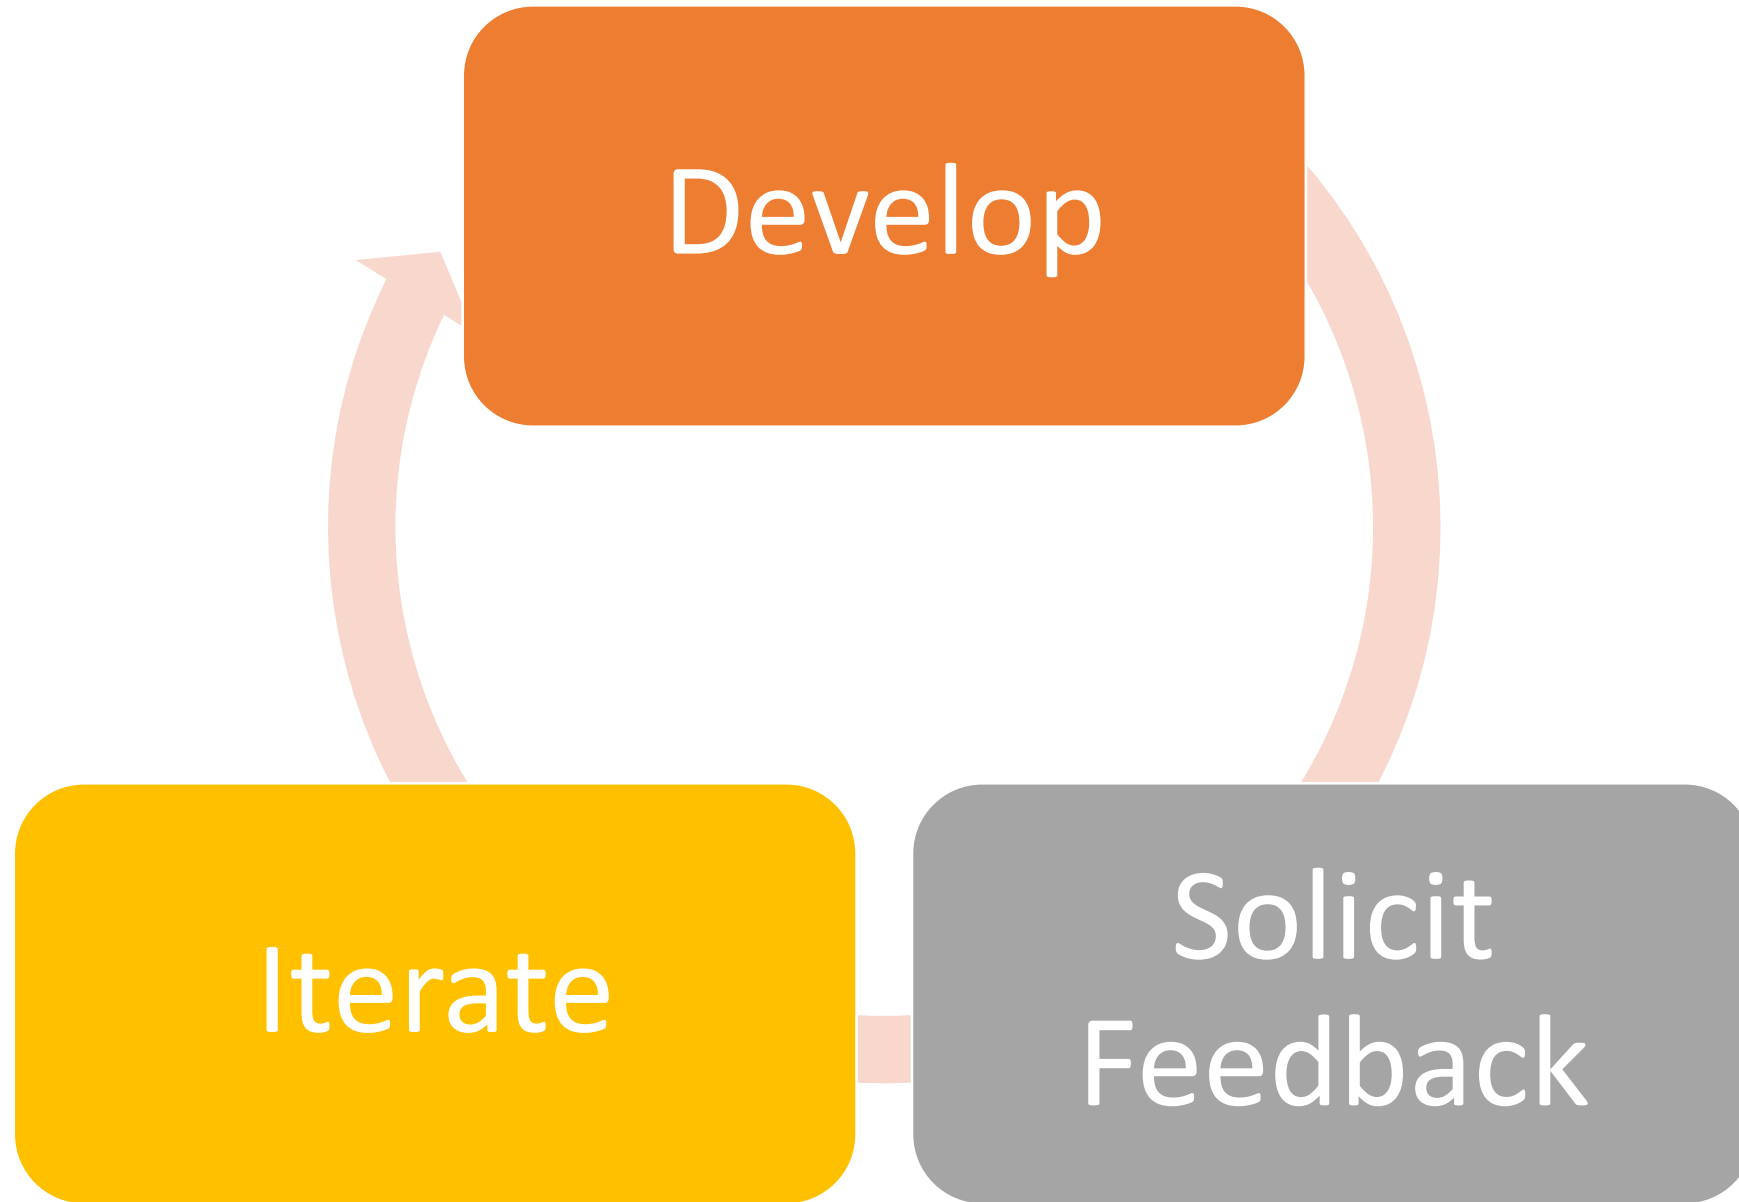

Not expected to have all the features and functions of a market-ready product, nor is it expected to contain all the usability or aesthetics of a final product.

Gives stakeholders, project managers, executives and potential investors a draft of what the final product might be.

Allows makers to determine how best to develop the product when it moves into full production for a final, market-ready item.

Prototype and Validate
